

Arrays

LECTURE
SUMMARY

PRE-PROGRAMMING

Covered in this lecture:

Explaining the concept of arrays

- ▶ Array = Series of pieces of information that are all formatted the same
- ▶ Arrays can include numbers, strings, or variables (but not combined)
- Using arrays saves time and it allows you to show more information more easily
- ▶ If you need to use only one item from the array, you use a pointer
- Pointers show what position each item of the array is in

See you next lecture!
